CITY & NEWS ITEMS. TUESDAY MORNING, SEPT. 28, 1858

AMERICAN WATCHES: THEIR MANUFACTURE AT WALTHAM, MARR,-COMPANISON WITH THE FOREION PRODUCT.-In this age of splendid mechanical triumphs, in which our own country stands so proudly foremost, there is on: that is just beginning to receive the attention and prominence it deserves. The same perfection of machinery that has made Colt's firearms, the acknowledged best in the world, after putient experiment, has been successfully applied to the manufacture of watches.

The introduction of American watches murks an era in the history of time and timekeepers, and may well be joined with the Atlantic Tele-graph, the Sewing Machine, and other kindred poesses of mind over matter, which so won

derfully distinguish the present period.

Hitherto, England and Switzerland have been
the watchmakers of the world. Coventry and
Prescott in Lancashire and Warwickshire, in Eugland, and Locle and La Charx de Fonds in the northern cantons of Switzerland, by Lake For the Fall of 1838 Also, all the LATEST STYLLES of Geneva, have been and are the world's fained sents of watch translated re; but now it seems that Waitham, Mass., has surpassed these old world competitors, and with machinery, system and intelligent skill, unaided by protection of any kind, already produces the most thorough exact timekeepers, at about half the cost of the bess foreign watches.

All imported watches are made by hand, the movements and parts of movements by different persons, and at different times and places; and

each watch is finally finished with special ref erence to itself—every part being made to suit only one place, and the whole movement fitted to a case which will suit no other movement—

The specific advantages of these wate'ies to

ealers and wearers, as compared with the best uported hand made watches, will be most readily apprehended by the following enumeration, to wit Each watch and each part of every watch, of a given style, is the unvarying counterpart of every watch of the same style, so that any single part is exactly fitted, and may be transposed indiscriminately to make up any one of any number of watches. The movements are

any number of watches. The movements are made to fit any one of any number of cases, thus enabling the dealer to keep a large and varied stock of movements with a limited number of cases, to suit the demands of trade.

The ease and facility with which any part can be restored when broken or lost by accident—each part being registered at the factory—a counterpart can be had for the mere cost of reproduction, and with whole movements changed and sent by mail or express to any rest of the and sent by mail or express to any part of the world. Dealers are thus brought directly in contact with the manufacturer, and a single retail profit is the only added cost to the wearer, to manufacturer's prices

The watches have fewer parts, are more sub-

will have no other.

There is no article of the common use that is so little understood, and about which so much deception, charlantanism, and swindling may be and is continually practiced, as attaches to the watch; and it will be a great comfort to houest dealers and legitimate buyers and wearers, to dealers and legitimate buyers and weavers, to know that they can have a substantial and reliable pocket time keeper, at a moderate price, made at home, and about which there can be no deception or mistake, that may not be easily, promptly, and cheaply remoded, by writing to Walthon, or to Robbins & Uppleton, 15 Maiden Lane, New York, General Agents
In many parts of the country great difficulty is experienced in finding good watch repairers and reliable time-keepers. By the introduction of American watches this difficulty may be almost entirely obviated, so that the country mer-

most entirely obviated, so that the country mer-chant can obtain adjusted watches as a part of

his miscellaneous stock, and the customer will buy his regulated timekeeper, wind it up, and go about his business, as he would after purchasing any other article without mystery or humbur.
The manufacturers, Messrs Appleton, Tracy, & Co., with their present means, can furnish 20,000 watches per annum, and they intend to furnish, from time to time, as the wants of the trade may require, other styles and sizes of watches, including an entire new form of sport-ing or timing wanch, which will indicate the minutest divisions of time with more accuracy

on has ever before been attained.

Arrangements are now being made to supply Arrangements are now being made to supply small and elegantly finished watches for ladies. The manufactory stands upon the banks of Charles River, in the town of Waltham, Mass., and occupies a site of surpassing beauty, covering an area of 100 by 100 feet, forming a language with an open court in the exiter.

quadraegle, with an open court in the center.— The building is two stories in height, and has eight hundred feet of floor line, with about six teen hundred feet of bench line, for the accommodation of the one hundred made and female artisans employed.

The motive power is a twelve-horse steam engine which gives motion to lines of shafting in all the rooms, to which are attached the nu-

merous delicate and wonderful machines which are used in the various processes of manufac-

Appleton, Tracy & Co. have added about a hundred acres adjoining their manufactory, which affords admirable locations for home sites for their workmen, several of whom have already purchased lots and erected comfortable homes in the immediate vicinity of the manu-Every facility is afforded to encourage and

attract the attention of skillful workmen, who are here offered largely renuncrative wages and constant employment, under the most pleasant conditions, with an opportunity, in a few years of accuring a competency and an independent home, with other advantages and attractions such as are no where else to be found.

testimonial of his excellent manufacture of en-giner. The prize referred to is a pair of buck homs, of large proportions, having five antiers on each side. These horns will doubtless be quite a curiosity to the Yankees of Rhode Island, as a century almost has flown since the deer has forsaken that puritanic land. Fastened on the horns at the junction of the prongs is a sil-ver plate bearing the following inscription:

FIRST PRIZE Taken at Piqua, July 3, 1858, by Neptune Fire Company, No. 2, of DAYTON, OHI Winning throw, 210 feet.

MORNING LEADER.

From the Atlantae Monthly.

A Word to the Wise.

Years went, pears ame; Light norsed with sharlow; Low met the maid up to, D sunning to rough the mendow, Not minny, "urged the bay; "Last in time to now and reason "By and by," also must be per; "Lowe's still in season."

"Ob, dear, I wish I were rich!"

This remark was extracted from my wife (as an obstinate molar might be extracted by a dentist) by the contemplation of a large opening in the toe of little Peter's stocking, which she had been trying in vain to devise some mode of closing, without destroying the symmetry of the garment, while a pile of similar articles of various sizes and cett. metry of the garment, while a pile of similar articles of various sizes and patterns lay at her clow, as much in need of mending as an old rake's habits. There they lay, seven pairs of little stockings, while their seven daily occupants were snugly snoozing in bed, forgetful of the many weary stitches their little stockings.

to a case which will suit no other movement—
no two watches being in all respects, approximately, slike

A large majority of these watches are worthless, as timekeepers, and a constant bill of expense to their owners, over 85,000,000 being
annually thrown away in vain attempts to improve them.

The American watches are constructed upon
the most scientific and approved principles, designed to secure uniformity, simplicity, durability, cheapiness, and unvarying perfection of
movement, and are sold with a certificate of
warranty in all cases, for tea years, signed by
the manufacturers.

The specific advantages of these watches to
dealers and waters, as compared with the best
dealers and waters, as compared with the best
twenty years ago those soft hazel eyes that now

(Concinded to morrow.) twenty years ago those soft hazel eyes that now beam with tender matronly love, first told the story of that love which those rosy lips (their bloom has not yet fided) confirmed; and that fair round face, that has grown fairer and round?

er, year by year, first lay upon my breast in malden trustfulness. We did not fall in love or walk into it, nor glide into it, but we took it by instinct as docks take to water, and we were married, with about as idefinite an idea of the modes and means of meeting our current expenses as a raw Irishman has of Egyptian hieroglyphics,

or a charcoal pedlar of honesty.

There must be a special providence which watches over fools and young married people.

In point of worldly possessions we commenced with nothing, and have had it ever since; for what with the increased expense of living and our success in adding to the census returns, cach year finds us as far from the possession of a respectable competency as its predecessor. Fi-nancially we have scrambled along in a helterskelter way, tumbling into puddles of debt from The watches have fewer parts, are more substantially made than any others, are easily kept clear, and the chances for failure by breakage are diminished four-fifths as compared with the English watch, which has upwards of eight hundred separate parts, while the American watch with a load of unmended and to be mended them.

The American watch is eminently adapted for railroad engineers and conductors, where exact time is of the utmost importance, and where the constant jar of the moving train offers the most trying test to prove the quality of a watch as a timekeeper. Many eminent engineers and conductors on the leading railroads of the country have been supplied with these watches and now will have no other.

There is no article of the common was that is shought and demand; at least so far as to make my own weekly supplies covered the weekly demands of wife, children, the grocer and landlord. And so I sat buried in thought, now brightened by remembrances of early happiness, and now darkened by shades of unpaid January bills, which load my deak making the demand for the great staple, money, it will have no other.

There is no article of the common was that is sain.

There is no article of the common was that is waite.

weight of the stockings, says, for the third time with increased fervor and a slight asperity, as

with increased terror and a sight asperity, as though demanding a regly:

"Oh, dear! dear! I wesh I were rioh."

"Riches, my love, take to themselves wings and fly away," I replied, with the air of one had seen myriads of tender young dollars put on their pin feathers, become fully fledged, and soar away to unknown regions like a flock of wild geese, leaving not even the smell of money behind.

behind.

"Well, if they do, they must go to roost somewhere, and I don't see why some of them can't settle here as well as elsewhere," said my wife as she commenced on a fresh stocking, and then added, with a slight dash of acidity—"There's no danger of our riches flying away."

"No, my dear, the wealth of loving hearts, of

unstained consciences, and contented disposi-tions, is a permanent investment and not at all

tions, is a permanent investment and not at all prone to arrial flights. These are your only true riches. With these you are richer than Crossus; without them, poor indeed."

"That's all very well, but that kind of property don't constitute a legal tender. You can't pay the grocer with consciences and dispositions, however pure and contented. They don't go half as far as promises, for I've known you to make them last a year. But speaking of the grocer reminds me that I thought I saw the bottom of the flour barrel this morning."

Now I knew in an instant that there wasn't flour enough in that barrel to make a Homose-

no more interest in the matter than she had in the number of statute miles between the earth and the moon.

It is a pleasant little fiction of hers that a

delicate hint relative to the consumptive state of that important ingredient in domestic economy, fails more lightly upon the car of the money-less than the plain and simple, though appalling sometimes—'The flour barrel is empty," and bringing the case to mind rather than state it in plain English. In fact, I have sometimes thought of teaching her to say it in Spanish, and thus remove a little of its harshness, but as she had no aptness for any tongue, except her own, I have abandoned the idea.

The purchase of a barrel of flour is an event in our household economy not to be treated lightly. It requires a preparation and consideration. In the first place, a certain sum of money is to be provided to meet the emergency, for whatever latitude the grocer may allow in minor matters, when you talk to him of flour, you must produce the quid pro que, or there is no trade.

The next point to be decided is the selection of the "brand." This leads to a triently interchange between the heads of the home department, which always results in my being com-Those Horns.—The Neptune Fire Company won the first prize at Piqua on the 3d of July last, and having won the first prize at the Cleveland Tournament, they have resolved to send the first one to Mr. Jeffers, Providence, Rhode Island, the manufacture of their machine, as a testimonial of his excellent manufacture of entire that the providence of the providence, and the first one to Mr. Jeffers, Providence, Rhode grocer called it) to see if my wife would know the difference; and I believe that I have had the biscuit that were made from it throws at me missioned to purchase the highest priced article in the market, and cautioned to avoid all attempts biscuit that were made from it thrown at me

ever since.

You should see my wife when she assists at the opening of the new barrel, and its snowy treasures are disclosed to her grateful gaze—Smiles dimple her rosy cheeks, and pieusors sparkles in her eyes. How tenderly she lifts each dipperfull from its receptacle, examines it with the eye of a judge, and pronounces its quality with the air of an expert! And what a glow of housewifely satisfaction mantles her fair face, when the first baking confirms her judgment! And then as day by day, she descends deeper into its recesses, each dipperfull, snowy though it he, leaves a shade upon her how, until at last the flour and the smiles and dimples disappear together. dimples disappear together. DOLLE & MALLOW!

As I sit reading of an evening, I can hear that wooden dipper thumping at the staves or gent-ly scraping the bottom of the burrel as it descends in search of the wherewithal for the bread of in search of the wherewithal for the bread of the coming day, and know that my wife is intimating by these the necessity of a fresh supply as though she told me in somany words, for she knows that I bear every thump. And by and by she comes in looking as denure as a kitten, and none but the initiated would ever dream that she had an empty flour barrel on her mind. But the next day brings a fresh barrel, fresh smiles and dimples, and renewed depletion of the already attenuated purse. The smiles and dimples are always cheap at the price, even if the flour is not.

"ECONOLY IS WEALTH,"

"TIME IS MONEY!"

Sewing Machines.

ONLY \$35 & \$50!—IT IS HOPED the overing one of these valuable time, health and into variing Machines in the work of the opening with the very best form of the distribution of the already attenuated purse. The smiles and dimples are always cheap at the price, even if the flour is not

flour is not.

As I meditated on this momentous subject, I As I mediated on this momentous subject, I could see by the knitting of her brow and the increased vigor with which she plied her task, that my wife's financial aspiration was still working in her mind, and knowing by long experience that confirmed thoughts, like explosive gases, must have vest, and fearing that some more vident remark might be the confirmed.

rake's habits. There they lay, seven pairs of little stockings, while their seven daily occupants were snugly snoozing in bed, forgetful of the many weary stitches their little feet had caused; and all around, on tables and chairs, was scattered a promiscuous assortment of juvenile aprons and dresses, jackets and breeches, each one bearing its owner's mark, in the shape of rips and rents.

"I wish I were rich!" repeated my wife.

"I wish I were rich!" repeated my wife.
